25X1A * [REDACTED] Comment. The report clearly indicates a concentration of Soviet supply shipments in the area southwest of Berlin. The daily average number of railroad cars traveling in the 1st Railroad Subdistrict during the period covered by the report exceeded the total number of cars running in the Dresden Railroad District during the same time. A total of 667 cars were listed for the period between 17 and 31 October. A comparison can be made only after further information specifying the number of cars used in supply traffic is available.
